Exam Marks and Grades

Extend the previous student mark and grade program so that more than one student's mark and target grade can be processed.

File Handling

TTA |

File Handling

In order to read from, write to or append to a file, we need to open it.

```
file_obj = open(filename, mode)
```

`file_obj` is an object that has methods specifically for interacting with files.

`filename` is the path (location) of the file.

`mode` indicates how we want to operate on the file.

TTA |

File Handling

Python also has many functions in libraries to help with handling files and directories.
